Tool kit set bosch

It's my first tutorial so don't expect anything too special. This tutorial will show you how to set up your drums. Your kick drum should be level to give you the best sound possible. Also, your hoop won't bend when attached to your pedals. First of all, sit down and give your feet somewhere comfortable. This is where your pedals have to go. To set up your Hay hat clutch, you want to be the 1st felt on each side of the top hat, fastened with a walnut. Your high-tech hats should be applauded together. If you have a double kick pedal, your Hi Hats should go left, or right. Try to keep your Hi Hat a higher priority than your double kick pedal. Your trap should be located between your pedals and close to Hi Hats.Your Rack Tom(s) should be located in front of you. You don't want them too far away from you. I put my sediment on a tsonian stand, to take it off, and another to the left. You can assemble them however you want. Your floor tom(s) should be a comfortable distance located on your side. I chose to put my floor strawberries on each side of me based on personal preference. Your crash mambas should not be placed higher than your shoulder. You want to assemble it at a slight angle so you don't hit the tsimbal with the stick. I have a splash Isamba temporarily mounted upside down on top of my crash. Your ride shouldn't be too far from you. I have my ride in front of me based on personal preference. It's not hard to hit the ride when it's near you. I hope I helped you organize your drums. Thank you for taking the time to read my first tutorial.
